1. Claims 1-15 and 17-30 are rejected under 35 U.S.C. 102(b) as being anticipated by the patent to Nakamura (JP 08-096412).

This patent teaches an optical information recording medium which comprises a temperature responsive layer 11 whose transmittance changes with a change in temperature caused by the irradiation of a light beam (see paragraph [0011]) and a layer of GeSbTe (see paragraph ([0020])). Since Nakamura employs the same materials as those claimed by applicants, it is inherent that that the Nakamura optical information recording medium functions in the manner claimed by applicants.

2. Claims 1-7, 10-18 and 21-30 are rejected under 35 U.S.C. 102(a) as being anticipated by the patent to Cheong et al. (USP 6,961,300).

This patent teaches an optical information recording medium which can comprise a layer of thermosensitive material (see paragraph 5, lines 14-28) or ZnO (see column 6, line 9) and a light absorption layer. Since Cheong et al. employ the same materials as those claimed by applicants, it is inherent that that the Cheong et al. optical information recording medium functions in the manner claimed by applicants.
